                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       thrombocytopenias, Guillain Barre syndrome and myasthenia gralymphoproliferative disorders such as multiple myeloma. The psequence represents the amino acid sequence of human B7-L_h1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           useful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L cancer including seminal vesicle cancer, lung, brain, breast, ovarian, pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell molecules are useful for alleviating the symptoms associated with autoimmune diseases involving chronic immune cell dysfunction or to treat diseases involving chronic immune cell dysfunction or to treat the symptoms associated with autoimmune diseases and autoimmune cell dysfunction or to treat the symptoms associated with autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, proliferative protein labour and delivery and endometriosis) and endometriosis and extracellular domains and other regulators of B7-L polypeptides are inceful for anhancing the immune regulators of B7-L polypeptides are

The invention relates to an isolated B7-like (B7-L) polypeptide (I).

CC useful for treating B7-like polypeptide-related disease, disorders (C) conditions including reproductive disorders (e.g. infertility, C) are conditions including reproductive disorders (e.g. infertility, C) miscarriage, preterm labour and delivery and endometricsis) and comparising comparising comparisons and other regulators of B7-L polypeptides are comparising comparison of comparison c

They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7. L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell useful for diagnosis and treatment of diseases involving abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treatment of allergy, asthma and hypersensitivity reactions, and hypersensitivity reactions, and hypersensitivity reactions, the property of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proliferation, including arteriosclerosis and vascular resembles.

Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for shock syndrome or allosensitisation due to blood transfusions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     133 AENEPCEVTCLPSHWTRLPDISWELGLLVSHSSYYFVPEPSDLQSAVSILALTPQSNGTL 192

cc proliferative disorders. Antibodies, soluble proteins comprising cc extracellular domains and other regulators of B7-L polypeptides are cc useful for enhancing the immune response to tumours. (I) plays a role in cc geninal vesicle hyperplasia in transgenic mice overexpressing B7-L cc growth and maintenance of cancer cells based on the observation of cc geninal vesicle hyperplasia in transgenic mice overexpressing B7-L cc growth and maintenance of (I) are useful for the treatment of cc polypeptide. Hence modulators of (I) are useful for the treatment of cc polypeptide. Hence modulators of (I) are useful for the treatment of cc provided the cancer including seminal vesicle cancer lung, brain, breast, ovarian, cc pathway can be manipulated to regulate cytotoxic T-lymphocyte response cc pathway can be manipulated to regulate cytotoxic T-lymphocyte response cd dependent B-cell mediated diseases and autoimmune diseases. B7-L cc diseases involving chronic immune cell dysfunction or to treat cd diseases involving chronic immune cell dysfunction or to treat cd autoimmune diseases such as systemic lupus erythematosus, rheumatoid carbitists, multiple sclerosis, diabetes, immune thrombocytopenic arbitists, multiple sclerosis, diabetes, immune thrombocytopenic carbitists, multiple sclerosis, diabetes, immune thrombocytopenic carbitists, disease, Hashimoto's thyroiditis and diabetes mellitus. They care also useful as immunosuppressive agents for bone marrow and organ are also useful for diamonsis and treatment of diseases involving abnormal cell transplantation or to prolong graft survival. B7-L molecules are also creatile for diamonsis and treatment of diseases involving abnormal cell

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, proterm labour and delivery and endometriosis) and extracellular domains and other regulators of B7-L polypeptides are growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L seminal vesicle hyperplasia in transgenic mice overexpressing B7-L
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Вþ

The invention relates to isolated polynucleotide (I) and CC polymeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC construction of the production of the production of the pressed sequence tags are considered as a loss used in diagnostics as expressed sequence tags are considered activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for tissue, as molecular weight markers and as quantitating a polypeptide in tissue, as molecular weight markers and as considered to the production of the production of the production of the polypeptide and polynucleotide sequences have applications in the colypeptide and polynucleotide sequences have applications of the productions of the productions of the production of mutations are considered to the product of materials to assess biodiversity and considered the product of mutations and the product of the productions of the production of the productions of the production of the pro

            dependent B-cell mediated diseases and autoimmune diseases. B7-L cl dependent B-cell mediated diseases and autoimmune diseases. B7-L cd diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus crythematosus, rheumatoid carthritis, multiple sclerosis, diabetes, immune thrombocytopenic crythematory bowel disease (Crohn's disease and ulcerative colitis), crythematory bowel disease (Crohn's disease and ulcerative colitis), crythematory states, they created a systemic for bone marrow and organ crythematory disease, Hashimoto's thyroiditis and diabetes mellitus. They created a systemic state of the systemic crythematory disease and organ crythematory disease, Hashimoto's thyroiditis and diabetes mellitus. They created a systemic crythematory disease and organ crythematory disease, Hashimoto's thyroiditis and diabetes mellitus. They created a systemic crythematory disease involving abnormal cell crythematory diseases, and creatment of diseases involving abnormal cell cuseful for disgnosis and treatment of diseases involving abnormal cell crythematory diseases and vascular restenosis.

CC proliferation, including arteriosclerosis and vascular restenosis.

CC proliferation or to prolong arteriosclerosis and vascular restenosis.

CC proliferation or to prolong arteriosclerosis and vascular restenosis.

CC proliferation, including arteriosclerosis and vascular restenosis.

CC proliferation and college are useful for alleviation of toxic crythematory diseases and properties are useful for alleviation, and for creatment of allergy, asthma and hypersensitivity reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAU75544 standard; Protein; 370 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) a useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, and miscarriage, preferm labour and delivery and endometricsis) and miscarriage, preferm labour and delivery and endometricsis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Welcher AA, Sarmiento UM,

CC The polypeptide, polynucleotide encoding it and antibody against (I). CC useful for treating B7-like polypeptide-related disease, disorders (I) are conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometricsis) and complete the disorders or cc miscarriage, preterm labour and delivery and endometricsis) and cc extracellular domains and other regulators of B7-L polypeptides are cc growth and maintenance of cancer cells based on the observation of cc seminal vesicle hyperplasia in transgenic mice overexpressing B7-L cc cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cc pathway can be manipulated to regulate cytotoxic T-lymphocyte response cc dependent B-cell mediated diseases and antonomnian disease, T-cell
          useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic treatment of allergy, asthma and hypersensitivity reactions, and for nephropathies (e.g. glomerulonephritis), skin disorders (pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrainsic alveolitis), vasculopathies, coeliac disease, anaemia, lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of rat B7-1.

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders of conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and

B7-L molecules are also transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis.

C proliferation, including arteriosclerosis and vascular restenosis.

C proliferation of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions.

C treatment of allergy, asthma and hypersensitivity reactions, and for penphapathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anemia, centrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and combocytopenias, Guillain-Barre syndrome of mouse B7-L_m2.

proliferation, including arteriosolerosis and vascular restenosis.
Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, and for nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and (extrinsic alveolitis), vasculopathies (crave's disease, various pneumopathies thrombocytopenias, Guillain-Barre syndrome and mysathenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of mouse B7-L_m3.
                                                                                                                                                                                                                                                                                                         in allograft transplantation, graft versus host disease, Tcell redependent B-cell mediated diseases and autoimmune diseases. B7-L dependent B-cell mediated diseases and autoimmune diseases. B7-L diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seminal vestcle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vestcle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response
                                                                                                                                                                                                                                          are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including afteriosciences and containing abnormal cell proliferation, including afteriosciences and containing abnormal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful for enhancing the immune response to tumours. (I) plays a growth and maintenance of cancer cells based on the observation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 13; Fig 7; 135pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New B7-like polypeptides, polynucleotides and their modulators, for diagnosing, preventing and treating reproductive, immune an proliferative disorders, e.g. cancer and arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse: B7-like protein; B7-L; antiinfertility; gynaecological; antilumour; cytostatic; immunosuppressive; antilarthritic; antirheumat antiinflammatory; dermatological; antipsoriatic; neuroprotective; antidiabetic; haemostatic; antithyroid; antiulcer; antiallergic; antiasthmatic; nephrotropic; antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; endocrinopathy; lymphoproliferative disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       which is made from a water-insoluble carrier immobilized with a protein having the sequence shown here. The materials of the invention, including adsorbents, are for extracorporeal circulation, which are applicable in the selective elimination of diabetic complication factors from a body fluid, and are therefore useful in treating vascular lesions like arteriosclerosis due to carbonyl stress products caused by abnormally promoted carbonyl stress from excretory dysfunction.
                                                                                                                                                                                                                                                                                             Human; Receptor for advanced glycosylation end product; RAGE; cardiant; tissue growth; neointimal formation; blood vessel; restenosis; diabetes; myocardial infarction; angioplasty; peripheral vascular surgery; angina; transgenic animal; acute thrombotic stroke; venous thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                       Human receptor for advanced glycosylation end product (RAGE) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                27-AUG-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAE23219 standard; Protein; 404 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              blood vessel injury and preventing exaggerated restenosis in a diabetic subject. The method comprises administering an inhibitor of receptor for advanced glycation/glycosylation end product (RAGE), so as to inhibit new tissue growth or neointimal formation in subject's blood vessels and preventing restenosis in the subject. The method is useful for inhibiting new tissue growth or neointimal formation in blood vessels in a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting new tissue growth or neointimal formation in blood vessels of subject suffering from diabetes, stroke and preventing restenosis, comprises administering inhibitor of receptor for advance glycation end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N-PSDB; AAD36952.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         like non-human animal, a transgenic non-human animal or a human suffering from diabetes, acute thrombotic stroke, venous thrombosis, unstable angina, myocardial infarction, abrupt closure following anciopiasty or stent placement, or thrombosis as a result of peripheral vascular surgery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method for inhibiting new tissue growth or neointimal formation in blood vessels in a subject that has experienced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 16; 43pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The method is also useful for preventing restenosis and for determining whether a compound inhibits new tissue growth in a blood vessel in a subject. The present sequence is human receptor for advanced glycosylation end product (RAGE) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a method of ameliorating neurovascular stress, and decreasing cerebral vasoconstriction in subject suffering from the control or acute cerebral amyloid angiopathy, comprising administering an inhibitor (I) of receptor for advanced glycation end product (RAGE). CC an inhibits transcytosis of amyloid beta peptides across blood-brain cc barrier, thus decreasing cerebral vasoconstriction and increasing cerebral blood flow. (I) is useful for treating amyloid angiopathy in a csubject, decreasing cerebral vasoconstriction in a transgenic non-human cc beta precursor protein) or a human, suffering from chronic or acute cerebral amyloid angiopathy, preferably, transgenic mouse overexpressing mutant human amyloid cerebral amyloid angiopathy, preferably, Alzheimer's disease, and for cameliorating neurovascular stress comprising cerebral amyloid angiopathy (considered by Alzheimer's comprising cerebral amyloid angiopathy preferably, branchising cerebral amyloid angiopathy (considered by Alzheimer's comprising cerebral amyloid angiopathy preferably, branchising cerebral amyloid angiopathy preferably, branchising cerebral amyloid angiopathy (considered by Alzheimer's comprising cerebral amyloid angiopathy preferably) and the neurovascular stress is caused by Alzheimer's comprising cerebral amyloid angiopathy considered profession and for considered profession and c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleic acid or GP354 polypeptide are used in the treatment of pancreatic injury and abnormal or disease conditions that relate to the pancreas, such as acute or chronic pancreatitis, pancreatic informal pancreatic endocrine and hormonal imbalance, pancreatic tumours and pancreatic endocrine and hormonal imbalance, pancreatic tumours and eassociated cancers, and autoimmune disorders which affect the associated cancers, and autoimmune disorders which affect the pancreas. They are also used in the treatment of an injury to the CNS, and abnormal or disease conditions that relate to the CNS, including Alzheimer's disease, Parkinson's disease, senile dementia, migraine, epilepsy, neuritis, neurasthenia, neuropathy, neural degeneration and neural tumours (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          at low levels in central nervous system (CNS) tissue. It shares not not than 30% amino acid identity with any previously described protein. The protein structure and tissue distribution of GP354 indicate a role in cell-cell recognition, binding, signalling and adhesion events in the pancreas and CNS. The present invention provides GP354 polypeptides and gP354 polynucleotides, as well as vectors, host cells, antibodies and related diagnostic and therapeutic methods. Claimed compositions comprising a gP354 therapeutic methods. Claimed compositions comprising a gP354 therapeutic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acid sequence encoding a member of immunoglobulin superfamily, designated GP354, useful for the treatment of Alzheimer's disease, Parkinson's disease, senile dementia, migraine and epilepsy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Carulli JP, Lukashin AV, Kilburn DR,

                                                                                                                                                                                                                                                                                                                                          and 99354 polynucleotides, as well as vectors, host cells, antibodies and related diagnostic and therapeutic methods. Claimed compositions comprising a 99354 nucleic acid or 69354 polypeptide are used in the treatment of pancreatic injury and abnormal or chronic pancreatitis, pancreatic to the pancreas, such as acute or exocrine insufficiency, pancreatic inflammation, pancreatic necrosis, pancreatic tumours and associated cancers, and autoimmune disorders which affect the pancreas. They are also used in the treatment of the CNS, including alzheimer's disease conditions that relate to the CNS, including alzheimer's disease, Parkinson's disease,
                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the protein sequence of human panéreatic GP354, a novel member of the immunoglobulin superfamily. GP354 is a pancreas-enriched integral membrane protein, which is also detected at low levels in central nervous system (CNS) tissue. The protein structure and tissue distribution indicate a role for GP354 in cell-cell recognition, binding, signalling and adhesion events in the pancreas and CNS. The invention provides GP354 polypeptides and contained a role of GP354 in the pancreas and CNS. The invention provides GP354 polypeptides
                                                                                                                                                                                                                                                                                                           senile dementia, migraine, epilepsy, neuritis, neurasthenia, neuropathy, neural degeneration and neural tumours (all claimed).

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         No.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 145.5

ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B; are produced by alternative initiation. A third isoform: C is produced by alternative splicing.

TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGH LEVELS IN THE DEVELOPING BRAIN AND NEURAL TUBE. IN ADULT, HIGHLY EXPRESSED IN THE BRAIN WITH VERY LOW LEVELS FOUND IN TESTIS, HEART AND THYMUS. ISOFORM C IS EXPRESSED ONLY IN THE EMBRYO.

EXPRESSED DURING MID GESTATION. LEVELS DECREASE IN LATE GESTATION AND REMAIN AT THIS LEVEL IN THE ADULT.
